

PräGnant

Blocking press

The **PräGnant** machine is a foil blocking press specifically designed for the needs of craft bookbinders and library binders. It is used wherever "one-off" titles or names are to be blocked.

With its wide range of accessories which are to be chosen according to customer's individual requirements, the **PräGnant** is extremely versatile.

The machine is characterized by the following **features**:

- + easy operation
- + accessories to be combined individually
- + self-centering typeholders
- + adjustable and lockable stamping pressure
- + complex decorations possible (with optional round-blocking plate)
- + tilting table for stamping on ready books
- + no faulty blockings thanks to full view on the product to be stamped
- + blocking of small dies possible (optional)

PräGnant

The **PräGnant** machine is a foil blocking press specifically designed for the needs of craft bookbinders and library binders.

The typeholders are self-centering and, by means of a quick-acting clamp, they allow an extremely easy and quick change of single type or complete lines. This qualifies the **PräGnant** to be used wherever "one-off" titles are to be blocked.

The book case (or other product) is placed upright into the machine, so that the blocking process can be observed all the time and if necessary be repeated without touching the case or taking it out

of the machine. Expensive faulty blockings are therefore eliminated.

The good view onto the case while blocking makes the machine also suitable for special gilding work such as blocking ornaments.

The **PräGnant** - a unique machine for a wide range of applications, including bookbinding, pattern-book manufacturing and gold-blocking departments.

Moreover, the quick change of type as well as the easy handling of the machine help to reduce costs in the field of gold blocking.

Applications:

cloth, leather and paper cases

presentation folders

certificates and document folders

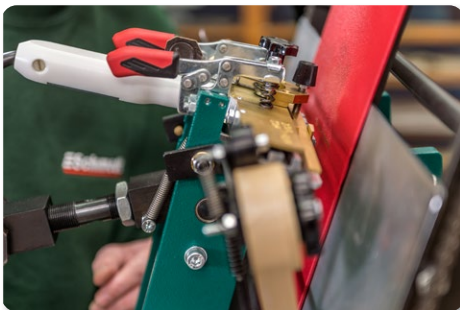

diaries and calendars

ring binders

coloured and blind embossings
